Ideation Phase
Define the Problem Statements

Date	03 October 2026
Team ID	
Project Name	Employee Data Import using Transform Maps (Spreadsheet) - ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. In this project, the customers are the ServiceNow administrators, HR staff and security owners who need employee-linked data imported from spreadsheets accurately, with details like department available for reporting and with proper access control.

I am	*Describe customer with 3-4 key characteristics - who are they?*	An administrator who manages employee-related data in ServiceNow and receives it as Excel/CSV sheets
I'm trying to	*List their outcome or "job" - what are they trying to achieve?*	Import spreadsheet data using Transform Maps and link every record to an employee with department details
but	*Describe what problems or barriers stand in the way - what bothers them most?*	Manual entry is slow, records are not linked to employees, and department details are missing for reporting
because	*Enter the "root cause" of why the problem or barrier exists.*	Data sits in spreadsheets with no field mapping to the User/Employee table and no access rules defined
which makes me feel	*Describe the emotions from the customer's point of view.*	Frustrated and worried about data errors and unauthorised access

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator / HR staff who receives employee data in spreadsheets	Import spreadsheet data using Transform Maps and link each record to an employee, pulling details like department	Manual entry is slow and department details are missing or inconsistent, making reporting difficult	Spreadsheet data is not mapped to the Employee (sys_user) reference field and has no coalesce rule	Frustrated and overwhelmed
PS-2	A system administrator / security owner responsible for protecting employee-linked data	Control who can view or edit employee-linked records and fields	Any user may be able to see or change sensitive fields	No Access Control Lists (ACLs) are defined and access has not been tested using Impersonate User	Worried and insecure about data safety
