Project Design Phase
Proposed Solution Template

Date	03 October 2026
Team ID	
Project Name	Employee Data Import using Transform Maps (Spreadsheet) - ServiceNow
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employee-related data arrives in spreadsheets and is entered record by record, which is slow and error-prone. Records are not linked to an employee, details such as department are missing for reporting, and there are no access controls to protect the data.
2.	Idea / Solution description	Import the spreadsheet into ServiceNow using a Data Source, a staging (Import Set) table and a Transform Map. Employee ID is mapped to the Employee (sys_user) reference field, Coalesce prevents duplicates, and department details are pulled into each record. Access Control Lists (ACLs) then secure the data and are verified using Impersonate User.
3.	Novelty / Uniqueness	Combines bulk spreadsheet import, automatic employee linking with department lookup, and ACL testing through Impersonate User in one low-code workflow, using only standard ServiceNow features and no external tools or custom applications.
4.	Social Impact / Customer Satisfaction	Saves administrators and HR staff hours of manual work, reduces data-entry errors, and gives managers accurate department-wise reports. Role-based access protects employees' personal and sensitive information, building trust in the data.
5.	Business Model (Revenue Model)	Internal productivity solution built on an existing ServiceNow subscription with no additional licence cost. Value comes from saved effort, fewer errors and faster reporting. It can be offered as a reusable import template or service to other teams or clients.
6.	Scalability of the Solution	The same Transform Map can be reused for new files and larger data volumes by loading in batches. It can be extended to other tables and fields, scheduled for regular imports, and the ACL approach applied to additional roles and departments.
