Project Development Phase
Performance Test

Date	03 October 2026
Team ID	
Project Name	Employee Data Import using Transform Maps (Spreadsheet) - ServiceNow
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template. This project uses ServiceNow instead of Tableau, so the template is applied to the data, filters, calculated fields, reports and dashboards available in ServiceNow. Tableau-specific items are marked where they do not apply.

S.No.	Parameter	Values
1.	Data Rendered	Employee data imported from the Excel / CSV spreadsheet and shown in the target table list view with the Employee reference and Department columns. **Number of records rendered:**
2.	Data Preprocessing	Spreadsheet cleaned before import: header row set, blank rows and merged cells removed, formats made consistent. In ServiceNow: Field Maps, Coalesce on Employee ID, and transform scripts to convert and clean values.
3.	Utilization of Filters	List filters on the target table (for example Department is a chosen value, Employee is not empty), plus report and dashboard filters by department. **Filters used:**
4.	Calculation fields Used	Derived fields created during import: Department pulled from the Employee (sys_user) record by a field map script, and e-mail converted to lower case by a script. No Tableau calculated fields are used. **Calculated / derived fields:**
5.	Dashboard design	ServiceNow dashboard with visualizations such as records by department (bar chart) and import status (inserted / updated / ignored). **No of Visualizations / Graphs:**
6.	Story Design	Tableau Stories are not applicable. The ServiceNow equivalent is a set of related reports shown together on a dashboard tab, for example department-wise record count and a list report of employee-linked records. **No of Visualizations / Graphs:**
