Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	
Project Name	Employee Data Import using Transform Maps (Spreadsheet) - ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Data Preparation	Prepare the employee spreadsheet (Excel/CSV) with a header row Clean blank rows, merged cells and inconsistent formats
FR-2	Data Source and Data Loading	Create a Data Source and attach the spreadsheet Load records into the Import Set (staging) table
FR-3	Transform Map Configuration	Create a Transform Map from staging table to target table Map fields using Field Maps (manual and auto map) Map Employee ID to the Employee (sys_user) reference field Set Coalesce on Employee ID to avoid duplicates
FR-4	Employee Details Population	Pull department and other employee details into each record Use a field map script where a transformation is needed
FR-5	Transform Execution and Verification	Run the Transform on the Import Set Review Transform History and Import Log for inserted, updated and ignored rows
FR-6	Access Control (ACL)	Create ACLs on the target table and its fields Test access using Impersonate User
FR-7	Reporting	Create reports and list views grouped by employee department

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import process uses standard ServiceNow modules (Data Sources, Transform Maps) and a simple spreadsheet template, so administrators can run it without coding.
NFR-2	Security	Access to employee-linked records and fields is restricted using role-based ACLs and verified with Impersonate User; only authorised users can run imports.

NFR No.	Non-Functional Requirement	Description
NFR-3	Reliability	Coalesce rules prevent duplicate records; Transform History and Import Log make errors traceable, and failed rows can be corrected and re-imported.
NFR-4	Performance	Bulk spreadsheet rows are loaded and transformed in a single run, much faster than manual entry; large files can be split into smaller batches.
NFR-5	Availability	Imports run on the ServiceNow cloud platform and can be scheduled during off-peak hours so that normal users are not affected.
NFR-6	Scalability	The same Transform Map can be reused for new files and larger data volumes, and extended with more fields or target tables.
